GN OTOMETRICS EXPANDS THE POPULAR ICS CHARTR 200 VNG/ENG SOLUTION
New Flexible Light Bar Provides True Portability

SCHAUMBURG, Ill., February 22, 2007 – GN Otometrics, the world leader in hearing and balance diagnostic systems, has introduced a new light bar for its ICS Chartr 200™ solution. The light bar comes in a lightweight and flexible design, perfectly supporting the portable VNG/ENG solution launched by GN Otometrics in early 2006.

The new light bar has a small footprint and telescopic extensions for the 30 degree visual angle, saving space whether wall-mounted or used with a tripod. At just 5.3 lbs, the light bar is 68% lighter than the previous version. Its compact design and sleek carrying case give clinicians the freedom to move easily from room to room or from office to office.

“The light bar is an important addition to our VNG/ENG solution” said Michelle Petrak, Ph.D., product manager at GN Otometrics. “With its versatile VNG/ENG test battery, easy-to-use remote control, ergonomic goggle, and now lightweight light bar, the ICS Chartr 200 is a truly portable system”.

Copenhagen-based GN Otometrics is the world's leading manufacturer of hearing and balance instruments and software. Its North American headquarters is in Schaumburg, Illinois. The company has solutions that range from infant-screening applications and audiologic diagnostics to balance testing and hearing-instrument fitting. More information about GN Otometrics can be found at www.gnotometrics.com.
