

GN Otometrics

Approximately three years ago, GN Otometrics began the challenging process of creating a unified organization from the merger and acquisition of six unique companies. Each company and brand possessed its own set of equities in terms of image, brand awareness and technologies. Our goal was to integrate the best qualities of each brand into a single unified company, building upon the strengths of our people, our leading edge technologies, and our strong brands. Today, GN Otometrics has emerged as the world's largest and world's leading manufacturer of hearing and balance instrumentation and software. Our extensive product portfolio ranges from infant screening applications, audiologic diagnostics and office management software, to balance and hearing instrument fitting. We are committed to developing innovative, integrated solutions to help healthcare professionals make the *best* possible decisions.

GN Otometric's innovative and advanced technologies allow professionals to provide an unparalleled standard of care to the hearing and balance impaired population. Recently, GN Otometrics introduced the "next" generation of equipment architecture with its launch of OTOflex™, the world's first Bluetooth® wireless clinical middle ear measurement instrument. OTOflex allows ultimate mobility and freedom to conduct comprehensive clinical testing with a portable hand-held device. Developments are also being made to expand our evoked potential systems to include the latest ASSR and VEMP protocols, and to upgrade our systems with the most current clinical evaluation procedures.
