GN Otometrics releases enhancements to its ICS CHARTR™ VNG/ENG

GN Otometrics announced today that it is releasing significant hardware and software enhancements to its leading vestibular diagnostic system for video and electronystagmography.

“The release of version 5.0 increases the user friendliness and flexibility of our premier CHARTR VNG/ENG system while reinforcing the system’s position as the most advanced technology in this field”, said Terry Ross, Vice-President of Sales for North America.

CHARTR enhancements include a faster, more reliable platform in Windows® XP Pro with a Pentium® IV and 2.2GHz processor. A new wireless mouse and keyboard enhance testing flexibility for users. Auto adjustment of the eye images makes patient setup almost instantaneous. Increased luminosity of the cameras in the VNG goggles lets users observe more eye detail, important for identifying Benign Paroxysmal Positional Vertigo (BPPV) and other eye movement abnormalities.

ICS is a brand of GN Otometrics, the world leader in hearing and balance diagnostic systems. Readers may contact their local GN Otometrics’ representative for more on the new CHARTR VNG/ENG features.
