### **Release for PPP in the UK**

Scheduled for release this October, AUDITDATA AuditBase System 4 Office Management System version 4.11.10 will be used by private hearing aid dispensing chains David Ormerod Hearing Centres and Ultravox to receive outsourced patients from more than 40 NHS hospitals.

The new release features:

*PPP client export and import of a limited data set* enabling the two private partners to receive patients from the public hospital clinics springs from NHS efforts to reduce waiting lists (the Modernisation of Hearing Aid Services programme). For the UK Public Private Partnership (PPP) solution, data generated at the private partner is returned to the outsourcing hospital clinic to maintain an integral data repository for further follow-up and statistics.

*General client export and import* as an optional module for all hospital clinics facilitating transfer of a patient's dataset to another hospital clinic for continued assessment.

*Enhanced Paediatric module* for handling referrals, clinical investigations, etc., as well as integrating further with other AuditBase modules such as Referrals, Diagnosis and Appointment Book. Reporting facilities have also been extended.

*HL7 integration between AuditBase and central EPR systems.* Handling a limited set of HL7 messaging, a solution has been successfully delivered and installed at the Wirral Hospital Trust for evaluation purposes.

Contact your local GN Otometrics representative for further information on the AuditBase System 4 version 4.11.10.
