

# Automated verification for a simpler workflow

Aurical® is the core in streamlining the entire fitting process while ensuring quality and efficiency at every step. Aurical offers a capability that makes it easy to verify hearing instrument fittings automatically with hearing instrument software from GN ReSound and Phonak. This functionality enables a streamlined fitting workflow and automated target-based fitting from within ReSound Aventa® using AutoRem and Phonak Target™ using TargetMatch.

# Easier verification with Aurical®

## Faster and more precise fitting

It's no secret that verifying a hearing instrument can be a time-consuming process. Some hearing care professionals hesitate to do verification because of the expected additional time consumption.

Aurical makes it easy and fast by automating the verification process. Tight integration between Aurical and the hearing instrument fitting software allows you to adjust the hearing instrument automatically and make an automated fit to a prescriptive target from inside Phonak or ReSound fitting software. Aurical and Otosuite® software simplify the entire verification process for a fast and precise fitting.

What's more, depending on the fitting software, various advanced functionalities are available to enhance the fitting process. For example, guidance to position the probe tube to the correct depth and binaural fitting deliver more efficiency gains.

## Smoother workflow and easier training

Now you can incorporate verification as a standard element in your clinic workflow. Aurical makes it easy and fast. Instead of learning and working in two software programs, you can now verify your hearing instrument fitting directly from inside the fitting software, and learn and work in one – streamlining the fitting and verification process. And, with a much shorter learning curve, you and your clients benefit from verified fittings sooner.

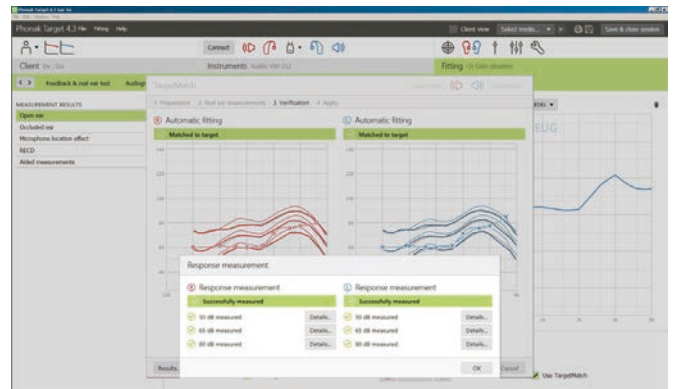

**Aurical® – your way to fitting excellence**

*Aurical makes verification easier with automated fitting to target from within the hearing instrument fitting software ReSound Aventa® using AutoRem and Phonak Target™ using TargetMatch.*

A complete, modular fitting solution, Aurical® encompasses audiometry, PMM, HIT, video otoscopy and a HI programming interface in one system. Hearing care professionals can use the modules independently or combine them as needed. This latest release demonstrates once again how Aurical continues to innovate – enabling hearing care professionals to realize greater efficiency gains while boosting the quality of counseling and care.
